

PRESS RELEASE

Gel Company celebrates 20 years of growth

Gel Company celebrates 20 years of serving the life science market. Founded in 1995, Gel Company, based in San Francisco, develops manufactures, and supplies low cost products to the life science research community.

The company has set its goal to provide innovative, high quality products with an efficient, friendly service. The aim of Gel Company is to offer all its products at competitive prices.

The focus is to develop, manufacture and supply innovative tools for proteomics, genomics, cell biology, liquid handling and microarray applications to scientists around the world. Gel Company can provide products with superior performance that are simple, safe to use and are environmentally friendly.

With distributors located world-wide the Gel Company range is known to many end users who appreciate the high quality and rapid service offered. A newly opened UK base situated in Cambridge further strengthens the ability of the company to support its distributors and customers.

With over 800 products the company has a team of experienced scientists dedicated to developing new technologies and products as well as providing the highest level of customer support. The growing portfolio of products was expanded late in 2014 when the Aplegen range of gel documentation products was added to the range. This now places Gel Company as one of the leading gel imaging companies in the world.

Says Gel Company: "We are very proud of our achievements since 1995 and look forward to the next 20 years with excitement as we continue our steady growth".
